

Death Sucks. Stop It.

www.campaignagainstaging.org

The Problem

Aging kills 100,000 out of the 150,000 people that die each day worldwide and inflicts an enormous amount of suffering on those who live with its effects. It will eventually kill everyone you know — including you — if something is not done about it.

The Solution

Aging is caused by the accumulation of damage in the human body that leads to age-related disease and eventually death. Medical treatments designed to remove this damage could restore the body to a youthful state. These treatments can be developed within your lifetime, with your help.

Our Mission

The mission of the Campaign Against Aging is to educate the public about the human aging process, increase public awareness of the realistic possibility of defeating aging within the lifetimes of people living today, and raise funds to support medical research to defeat aging.

How You Can Help

- Visit www.campaignagainstaging.org to learn more, and register there
- Become a fan of Campaign Against Aging on Facebook
- Tell your friends about the Campaign Against Aging
- Volunteer your free time, get involved in research, or make a donation
